

MoneyWorks Datacentre

A dedicated network server for MoneyWorks Gold accounting data, MoneyWorks Datacentre is exactly what you need to share accounts for multiple companies or on a central server.

- Serves multiple Moneyworks Gold accounting files on demand to multiple users
- Available 24/7 for remote access
- Supports mixed Mac and PC networks
- Can be expanded to up to 99 concurrent users
- High performance database for fast access

Overview

Datacentre is the ultimate accounting server software for higher volume organizations with many users and/or remote locations requiring fast, simultaneous server based connectivity. It provides all the power, features, and flexibility of MoneyWorks Gold (which operates as the network client for Datacentre), while providing the convenience of non-stop server-based networking and easy accounts sharing for multiple companies simultaneously.

DataCentre offers the convenience of concurrent licensing. That means you can install the software on as many desktops as you'd like (both Macs and PCs) — and then any of them can use DataCentre simultaneously up to your license limit. The base installation includes a full copy of MoneyWorks Gold and allows three concurrent users. Add additional concurrent licenses with easy-to-install server license keys.

The friendly and intuitive interface make MoneyWorks easy to learn and to use. There's a comprehensive tutorial that takes you step by step through the main features that you'll use. And if you need additional help, MoneyWorks comes with a comprehensive manual written in plain English.

Did you notice?

MoneyWorks Datacentre can be hosted on a dedicated server (such as an Xserve), or just on a desktop machine such as an iMac that can act as the server.

Features

- All the accounting and reporting features of MoneyWorks Gold
- Server-installable service--always on
- Multi-user access to multiple accounting databases simultaneously and on-demand
- Modern, fast network database server
- Concurrent client-licensing--install MoneyWorks Gold client software on as many workstations as you like
